Advanced Lessons in Fisheries and Aquaculture Economics. 2nd Edition
A Tribute to Prof. M.C. Nandeeshha (1957 – 2012)

Menéndez Pelayo International University (UIMP) has gained extensive experience and prestige in the organization of university-level courses and seminars. Active participation by well-known Spanish and foreign specialists and lecturers has led it to be considered one of Europe's leading summer universities. Since its creation it has also been considered as the leading university in Spain in organising courses in Spanish language and culture for foreigners.

More than eight thousand students attend its courses in Santander every summer. The academic programme, covering topical matters and areas of scientific interest, is complemented by a wide range of cultural activities.

In cooperation with other academic institutions and with FAO, UIMP will this year organise the second edition of the course on fisheries and aquaculture economics.

Economics and management sciences are of increasing importance in fisheries and aquaculture to understand the uncertain environments in production and Marketing. Changes in management systems, public policies and consumer preferences evidence the need of a continuous adaptation to the economic and social environment in which the activities take place. Aquaculture, meanwhile, is a relatively new harvest method complementing and replacing wild fisheries in the global seafood supply. It has become a sustainable alternative, despite of conflicts, to meet with the increasing World seafood demand.

The seminar intends to provide information on recent progress in the field of fisheries and aquaculture economics and set a framework for understand and assess the changes and developments of producers, consumers, and markets. The sessions will provide a discussion and exchange forum for major stakeholders involved in the value chain of fisheries and aquaculture, and a place to share and analyze the latest developments in the areas fisheries management, policies and marketing.

The course is oriented for participants with university degree or an equivalent professional experience, researchers, policy makers, industry players, consultants, students, advisors, and other specialists involved in the social topics of fisheries and aquaculture.
